(4) Groundwater encountered: No ☒ Yes ☐ If yes, show depth below ground surface \_\_\_\_\_ ft. and attach sample results. (5) Attach soil sample results and a diagram of sample locations and excavations.

**Additional Comments:**

The reserve pit will be closed in place by capping. Pit contents will be deemed able to provide physical stability to support the pit cover. The excess pit liner will then be folded in around the edges of the pit over the mud and cuttings. A small trench will be cut 3' away from all 4 sides of the pit, then a 20 mil plastic liner that meets ASTM standards will be placed over the top of the reserve pit, the edges of the liner will be buried in the trench covering the entire reserve pit with a 3' feet skirt. At least 3 feet of soil that is capable of supporting native plant growth will be placed on top. This completes the capping of the Saguaro 28 State #1 reserve pit.

I hereby certify that the information above is true and complete to the best of my knowledge and belief. I further certify that the above-described pit or below-grade tank has been/will be constructed or closed according to NMOCD guidelines ☒, a general permit ☐, or an (attached) alternative OCD-approved plan ☐.
