#### Alternatives to Reduce Flaring

Below are alternatives considered from a conceptual standpoint to reduce the amount of gas flared.

sand and non-pipeline quality gas be vented and/or flared rather than sold on a temporary basis.

is Operator's belief the system can take this gas upon completion of the well(s).

- Power Generation On lease
  - o Only a portion of gas is consumed operating the generator, remainder of gas will be flared
- Compressed Natural Gas On lease
  - o Gas flared would be minimal, but might be uneconomical to operate when gas volume declines

Safety requirements during cleanout operations from the use of underbalanced air cleanout systems may necessitate that

- NGL Removal On lease
  - o Plants are expensive, residue gas is still flared, and uneconomical to operate when gas volume declines

Submission Date: 11/05/2018

PWD Data

Operator Name: MEWBOURNE OIL COMPANY

Well Name: LITTLEGIANTS20/19 B3HE FEDCOM

Well Number: 1H

Well Type: OIL WELL

**APD ID:** 10400035879

Well Work Type: Drill

#### Section 1 - General

Would you like to address long-term produced water disposal? NO

### **Section 2 - Lined Pits**

Would you like to utilize Lined Pit PWD options? NO
