13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

As per Robert Elliott's conversation with Joe Lara today regarding the cement job for the production casing on the Righthand Canyon "34" Fee Com. #7, Devon Energy proposes to top the cement as follows:

1. Punch squeeze holes at 4,250'. Set a cement retainer at 4,200'.
2. Establish circulation to surface up the 7" X 9-5/8" annulus and estimate cement volume using a fluid caliper plus 30% excess. Pump enough 12.5 ppg 35:65 Poz:Class "C" cement to circulate cement to surface.
3. If cement is not circulated to surface then a temperature log will be run to find the top of cement, and the BLM will be notified.
