Hydrogen Sulfide (H₂S) Contingency Plan

For

Lovelace "27" # 2

**2410' FSL & 1165' FEL,
Sec-27, T-22S R-27E**

30-015-34135

Eddy County NM

RECEIVED

JUN 06 2005

ODD-ARTeam

Lovelace "27" # 2

This is an open drilling site. H₂S monitoring equipment and emergency response equipment will be used within 500' of zones known to contain H₂S, including warning signs, wind indicators and H₂S monitor.

Assumed 100 ppm ROE = 3000' (Radius of Exposure)
 100 ppm H₂S concentration shall trigger activation of this plan.

Escape

Crews shall escape upwind of escaping gas in the event of an emergency release of gas. Escape can be facilitated East on lease road to Grand road. Crews should then move North or South outside of the shown ROE. Provision should then be made to block both directions of Grand Road so as not to allow anyone traversing into a hazardous area. The blockade should be at a safe distance outside of the ROE There is one home in or near the ROE. The home is approximately ½ mile SouthEast. Care and consideration for the safety of the residents is primary in the event of a hazardous release. Evacuate the home despite the direction of the wind if the H₂S reaches the ROE concentration.

Site Specific Emergency Information

Lovelace "27" Well #2

This is an open drilling site. H₂S monitoring equipment and emergency response equipment will be used within 500' of zones known to contain H₂S, including warning signs, wind indicators, flare equipment and H₂S monitors.

Prevailing wind direction is N-NE

**Location
Satellite
Photo**

Shown on the map are homes, buildings and distances from the wellsite.

A warning sign shall be displayed at the entrance to the location.

Safe briefing areas will be set up as a first staging/planning area in an emergency

Emergency Procedures

In the case of a release of gas containing H₂S, the first responder(s) must isolate the area and prevent entry by other persons into the 100 ppm ROE. Additionally the first responder(s) must evacuate any public places encompassed by the 100 ppm ROE. First responder(s) must take care not to injure themselves during this operation. Company and/or local officials must be contacted to aid in this operation. Evacuation of the public should be beyond the 100 ppm ROE.

All responders must have training in the detection of H₂S, measures for protection against the gas, equipment used for protection and emergency response. Additionally, responders must be equipped with H₂S monitors and air packs in order to control the release. Use the “buddy system” to ensure no injuries during the response.

Ignition of Gas Source

Should control of the well be considered lost and ignition considered, take care to protect against exposure to Sulfur Dioxide (SO₂). Intentional ignition must be coordinated with the NMOCD and local officials. Additionally the NM State Police may become involved. NM State Police shall be the Incident Command on scene of any major release. Take care to protect downwind whenever there is an ignition of the gas

Characteristics of H₂S and SO₂

Common Name	Chemical Formula	Specific Gravity	Threshold Limit	Hazardous Limit	Lethal Concentration
Hydrogen Sulfide	H ₂ S	1.189 Air = 1	10 ppm	100 ppm/hr	600 ppm
Sulfur Dioxide	SO ₂	2.21 Air = 1	2 ppm	N/A	1000 ppm

Contacting Authorities

Devon Energy Corp. personnel must liaison with local and state agencies to ensure a proper response to a major release. Additionally, the OCD must be notified of the release as soon as possible but no later than 4 hours. Agencies will ask for information such as type and volume of release, wind direction, location of release, etc. Be prepared with all information available. The following call list of essential and potential responders has been prepared for use during a release. Devon Energy Corp. Company response must be in coordination with the State of New Mexico’s ‘Hazardous Materials Emergency Response Plan’ (HMER)
