Describe the proposed program. If this application is to DEEPEN or PLUG BACK, give the data on the present productive zone and proposed new productive zone. Describe the blowout prevention program, if any. Use additional sheets if necessary.

Yates Petroleum Corporation proposes to drill / test the Precambrian/Intermediate formations. Approximately 600' of surface casing will be set / cemented. If commercial, production casing will be run / cemented, will perforate and stimulate as needed for production.

Sources at Yates Petroleum Corporation have relayed information to me that they believe there will be no H2S anticipated from the surface to the Precambrian Formation to meet the OCD's minimum requirements for the submission of a contingency plan per Rule 118.

**MUD PROGRAM:** 0-600' FW Gel/Paper/LCM; 600-1300' Cut Brine; 1300'-4280' Brine; 4280-TD Starch/Salt Gel.

**BOPE PROGRAM:** A 2000# BOPE will be installed on the 8 5/8 casing will be tested daily.

I hereby certify that the information given above is true and complete to the best of my knowledge and belief. I further certify that the drilling pit will be constructed according to NMOCD guidelines ☐, a general permit ☒, or an (attached) alternative OCD-approved plan ☐.
