Bryan:

The WOC times for the surface and intermediate strings of casing on the above referenced well were based on the thickening and compressive strength development time estimates for the accelerated cement used for these jobs. That we did not wait a full 24 hours as required by R-111-P was an oversight that will be corrected on any future wells drilled in the potash area.

Thanks in advance for your consideration and don't hesitate to call or write if you have any additional concerns.

Sincerely,

Larry R. Scott

Dear Mr. Scott,

I need to have sent **no later than 10/04/2007** the following information:

The complete set of electric logs ran on well.

Chloride sample readings as per the condition of approval dated 10/20/2006.

All subsequent reports from spud to the completion of this well.

I cannot approve your C-104 (Request for Allowable and Authorization To Transport) at this time per the above after carefully reviewing the regulatory information.

Please call if you have any questions in regards to this matter.
