13 Describe Proposed or Completed Operation: Clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports must be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 must be filed once testing has been completed. Final Abandonment Notices must be filed only after all requirements, including reclamation, have been completed and the operator has determined that the site is ready for final inspection.)

When well is hot oiled, fluid bubbles up around wellhead. Checked 4 1/2" x 8 5/8" annulus for pressure - 750 psi. Bleeds off immediately, then continues to bubble out riser. When shut in, pressure builds slowly to 750 psi. Started 5/30/07.

1. MIRU PU. Pull rods, pump and tubing.
2. TIH with RBP and packer to test 4 1/2" casing and check for leaks.
3. Repair casing as necessary.
4. Run tubing, pump and rods.

NOTE: During process of checking for leaks, casing tested to 1000 psi and held OK, 6/1/07. Ran Cement Bond Log - indicated TOC at 1918' behind 4 1/2" casing. Appears that some formation between TOC and surface casing shoe at 1490' is communicating to surface. BP proposes to perforate 4 1/2" casing at 1670' and cement 4 1/2" x 8 5/8" annulus from 1670' to surface.

NOTE: Originally filed with State of New Mexico Oil Conservation Division in error.
