Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.* Hole in steel discharge line corroded and release produced water. Spill was contained within the battery. All fluid was picked up with a vacuum truck. The battery was delineated using field analysis. Confirmation samples were taken to the lab. The groundwater in the surrounding area shows < 50' using the SEO data and the ChevronTexaco groundwater map. The following are the Recommended Action Levels for the site : Chloride - 250 ppm, TPH - 100 ppm, BTEX - 100 ppm(field vapor analysis).

Describe Area Affected and Cleanup Action Taken.* As per the approved plan all impacted soil was excavated and hauled to Lea Land Disposal. The site was backfilled with clean native soil. Attached are the field analysis, lab confirmations, plat maps and pictures of the remediation. The backfill process was in completion on May 20, 2009 when a second spill occurred at the battery. The second spill will be addressed as a separate occurrence in a separate report.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
