13. Describe proposed or completed operations. (Clearly state all pertinent details, and give pertinent notes, including estimated date of starting any proposed work). SEE RULE 19.15.7.14 NMAC. For Multiple Completions: Attach wellbore diagram of proposed completion or recompletion.

Yates Petroleum Corporation plans to plug and abandon this well as follows:

1. MIRU WSU. Rig up any safety equipment as needed. No casing recovery will be attempted as production casing is cemented to surface. POOH with tubing and packer if any exist.
2. Set a CIBP at 2138' with 35' cement on top.
3. Spot a 380' cement plug from 785'-1165'. This will leave a plug across intermediate casing shoe. WOC and tag plug, reset if necessary.
4. Perforate 4 squeeze holes 343'. Tie onto 4-1/2" casing and establish circulation up the 4-1/2 x 8-5/8" annulus. Spot a 343' cement plug inside and outside casing from 0'-343'. This will leave a plug across surface casing shoe and act as the surface plug. WOC and tag, reset if necessary.
5. Remove all surface equipment, weld dry hole marker and clean location as per regulations.

NOTE: Yates Petroleum Corporation will use steel pits and no earth pits
