13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

During the monitoring period we were able to observe any gas migration on the casing strings by shutting the well in over the weekends with a guage to monitor any pressure build-up and monitoring the gas migration during the weekdays. There was also a flowline from the well to a tank for any fluid discharge. The results from the monitoring period are as follows: there was a pressure decrease in the intermediate casing string (string where the bubbles were observed after setting the last plug) of 8 psi to 4.5 psi and 0 psi on both the surface and production strings. There was also no fluid discharge into the tank. As no fluid has been observed, we are requesting to remove the flowline from the well to the tank and leaving the well open to atmosphere to physically observe for the migration of the bubbles in the intermediate casing. In this area it is typical for gas migration to be decreasing over a monitoring period of a few weeks and since the intermediate casing string pressure has been decreasing and no fluid observed, we are requesting an additional 30 days to continue monitoring the Yates C Fed 20 well.
