Form C-144 CLEZ

For closed-loop systems that only use above ground steel tanks or haul-off bins and propose to implement waste removal for closure, submit to the appropriate NMOCD District Office.

# Closed-Loop System Permit or Closure Plan Application

(that only use above ground steel tanks or haul-off bins and propose to implement waste removal for closure)		
Type of action: Permit Closure		
Instructions: Please submit one application (Form C-144 CLEZ) per individual closed-loop system request. For any closed-loop system that only use above ground steel tunks or haul-off bins and propose to implement waste removal f	or closure, please submit a Form C-144.	
Please be advised that approval of this request does not relieve the operator of liability should operations result in pollution environment. Nor does approval relieve the operator of its responsibility to comply with any other applicable government.	of surface water, ground water or the authority's rules, regulations or ordinances.

### **Keystone Petroleum NM LLC**

**Closed Loop Mud System** 

#### **Design**

Drilling mud will circulate through a closed system of steel pits on the surface, mud pumps, piping on the surface to the rotating head, and return piping from the bell nipple back to the steel pits. Solids will be removed from the mud in the steel pits using the following equipment:

- 1) 2 shale shakers will be installed with 110 250 mesh screens. These shakers should remove solids down to 65 micron diameter. All return drilling mud will flow across the shale shakers.
- 2) A mud cleaner will be installed to remove solids down to 25 40 microns. Drilling mud will circulate through the mud cleaner using a Monel pump. This pump will generate optimal pressure for the mud cleaning cones to process solids.
- 3) A high speed centrifuge will process under flows from the mud cleaner. The centrifuge is capable of cleaning to the 10 micron level.
- 4) A dewatering unit will add polymer to the feed tube of the centrifuge to flocculate the solids. Flocculation increases the effective particle size of the solids, enhancing the performance of the centrifuge to remove solids down to the 1 micron level.
- 5) Roll off bins (20 cubic yards per bin) and rails will be installed next to the steel pits so that the solids removed by the shakers, mud cleaners, and centrifuge fall directly into a bin. Once a bin is full, it will be picked up by a truck and hauled to disposal. An empty bin is moved under the solids equipment along the rail so that the solids equipment can operate continuously.

#### **Operation and Maintenance**

Personnel dedicated exclusively to operating and maintaining the solids control equipment will be on site 24 hours per day while drilling. The solids control personnel will monitor the shale shakers, mud cleaner, centrifuge, dewatering unit, and all associated pumps and piping to make sure the equipment is functioning correctly. If equipment problems are identified, the solids control personnel will coordinate repair or replacement of the equipment. The solids control personnel will also monitor the level of solids in the roll off bins and arrange for trucks to pick up the bins when they are filled.

# **Closure Plan**

Cuttings and other solids will be hauled off to a permitted landfill according to OCD guidelines. Liquids will be re-used to the extent possible, but if liquids need to be disposed off, they will be hauled to a permitted disposal facility. Liquids to be temporarily stored on site will be placed in 500 bbl "frac" tanks.

For the Palmillo 14 State Com #001H well, both solids and liquid waste will be taken to the CRI "Halfway Facility" NM-01-0006 between Carlsbad and Hobbs.
