Cimarex Energy Co. of Colorado Unit K, Section 29 T18S-R26E, Eddy County, NM

In response to questions asked under Section II B of Bulletin NTL-6, the following information is provided for your consideration:

Location:

1650 FSL & 1650 FWL

Elevation above sea level:

3430' GR

Proposed drilling depth:

3,000'

Proposed Mud Circulating System:

Depth		Mud Wt Visc		Fluid Loss	Type Mud	
0'	to	950'	8.4 - 8.8	28	NC	FW
0'	to	3000'	9.9 - 10.1	30-32	NC	Brine water

Sufficient mud materials will be kept on location at all times in order to combat lost circulation or unexpected kicks. In order to run DSTs, open hole logs, and casing, the viscosity and water loss may have to be adjusted in order to meet these needs.

Casing & Cementing Plan:

String	Hole Size	e Depth			Casing OD		Weight Collar Grad		Grade

Mud, Casing, Cementing, and BOP Attachment Alaska 29 Fee No. 3 Cimarex Energy Co. of Colorado Unit O, Section 15 T19S-R29E, Eddy County, NM

Pressure control Equipment:

Exhibit "E-1" - A 13%" 3000 PSI working pressure B.O.P. consisting of a one set of blind rams and one set of pipe rams and a 3000 psi annular-type preventor. A choke manifold and 120 gallon accumulator with floor and remote operating stations and auxiliary power system. A kelly cock will be installed and maintained in operable condition and a drill string safety valve in the open position will be available on the rig floor. Mud gas seperator will be available if drilling in H2S areas.

BOP unit will be hydraulically operated. Below intermediate casing shoe, BOP will be operated at least once a day while drilling and the blind rams will be operated when out of hole during trips. No abnormal pressure or temperature is expected while drilling. From the base of the surface pipe through the running of production casing, the well will be equipped with a 3000 psi BOP system.

Test BOP equipment and choke manifold to 250 psi low and 3000 psi high and annular BOP to 250 psi low and 1500 psi high by an independent service company.
