

NEW MEXICO STATE LAND OFFICE  
OFFICE OF THE STATE GEOLOGIST  
SANTA FE, NEW MEXICO

### MISCELLANEOUS REPORTS ON WELLS

Submit this report in duplicate to the State Geologist or proper Oil and Gas Inspector within ten days after the work specified is completed. It should be signed and sworn to before a notary public for reports on beginning drilling operations, results of shooting well, results of test of water shut-off, result of abandonment of well, and other important operations, even though the work was witnessed by the State Geologist or Oil and Gas Inspector. Reports on minor operations need not be signed and sworn to before a notary public, but such operations should be witnessed by an Oil and Gas Inspector if possible.

Indicate nature of report by checking below:

REPORT ON BEGINNING DRILLING OPERATIONS		REPORT ON DEEPENING WELL	
REPORT ON RESULT OF SHOOTING WELL		REPORT ON PULLING OR OTHERWISE ALTERING CASING	
REPORT ON RESULT OF TEST OF WATER SHUT-OFF		REPORT ON REPAIRING WELL	
REPORT ON RESULT OF ABANDONMENT OF WELL	<b>X</b>

NAME TITLE

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific information required.

1. The first step in the process of developing a new product is to identify a market need. This is often done through market research, which can involve surveys, focus groups, and other methods of gathering information from potential customers. Once a market need has been identified, the next step is to develop a concept for a product that meets that need. This is often done through brainstorming and prototyping. Once a concept has been developed, the next step is to create a business plan for the product. This plan should outline the costs of production, the pricing strategy, and the marketing strategy. Once a business plan has been created, the next step is to secure funding for the product. This can be done through a variety of methods, including venture capital, angel investors, and crowdfunding. Once funding has been secured, the next step is to develop the product. This involves creating a prototype, testing the prototype, and refining the product based on feedback. Once the product has been developed, the next step is to launch the product. This involves creating a marketing campaign, distributing the product, and monitoring sales. Finally, the last step in the process is to evaluate the product's performance. This involves analyzing sales data, customer feedback, and other metrics to determine if the product is meeting its goals. If the product is not meeting its goals, the next step is to make adjustments to the product or the marketing strategy. If the product is meeting its goals, the next step is to continue to monitor its performance and make adjustments as needed.

editors and the publisher of "The New York Times" have been shown to be "in the possession of confidential information" and "in the possession of confidential information" and "in the possession of confidential information".

1. **Identify the main components of the system.** The system consists of a **client** and a **server**. The client is responsible for sending requests to the server, and the server is responsible for processing these requests and returning responses.

2. **Describe the flow of data.** Data flows from the client to the server via a **network**. The server processes the request and sends the response back to the client.

3. **Explain the role of each component.**

- Client:** Initiates requests and receives responses.
- Server:** Processes requests and provides data/services.
- Network:** Facilitates communication between the client and server.

4. **Discuss the system architecture.** The system follows a **client-server architecture**, where the client and server are separate entities connected by a network.

5. **Summarize the key points.** The system is designed for efficient data exchange between a client and a server over a network.
