

HISTORY OF OIL OR GAS WELL

It is of the greatest importance to have a complete history of the well. Please state in detail the dates of redrilling, together with the reasons for the work and its results. If there were any changes made in the casing, state fully, and if any casing was "undetached" or left in the well, give its size and location. If the well has been dynamited, give date, position, and number of shots. If plugs or bridges were put in to test for water, state kind of material used, position, and results of pumping or bailing.

Spudded 6-17-61 with rotary tools. At TD 951', 5 1/2" 17# casing was set at 947' with 175 sac cement which circulated. Rotary tools were moved off and cable tools moved in to complete well. After drilling plug with cable tools, hole was diked up and allowed to stand for 30 minutes. There was no entry of any fluid and drilling continued to 1031', total depth. Two oil zones from 994 to 1007 and 1013 to 1030 were encountered which yielded 3 1/4 barrels of free oil per day. At TD 1031 well was acidized with 1000 gallons acid, swabbed back and cleaned up. Attempted to water frac using 10-20 sand. Formation would not yield - cleaned well up and acidized with 10,000 gallons acid. Swabbed and cleaned well up and put on pump to test. Well made 5 BOPD. After extensive testing, well fraced with oil using 900 lbs oil and 10,000# 20-40 sand. Used 5,000 gallons acid as spearhead ahead of frac. Well fraced using 1 1/2" sand per gallon with injection rate of 30 barrels per minute. Cleaned well up and put on pump. After recovering all load oil, well making 5 BOPD. Potentiated well for 5 BOPD, no water 10-31-61.
