DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to re-enter this well and perforate from 904-920 feet and treat the perforated interval with approximately 15,000# sand and 350 bbls lease oil for an attempted completion in the San Andres formation.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
