Dear Rand,

We recommend plugging the above captioned wells to protect fresh waters of the state of New Mexico.

We do not see any major problems in plugging these wells but it looks as though we will need to play these by ear because the records are incomplete.

According to our records we still have plugging bonds in place.

If we may be of service to you please let me know.

Yours Truly, .

Ray Smith
Deputy Oil & Gas Inspector

Christopher #1
Ut B-32-6S-26E

Well was drilled to 450' and the hole went crooked at 330'.
Set 8 5/8" casing at 330' and cemented with 200 Sx of cement
but did not circulate cement to the surface. Pumped 225 Sx
of cement down backside and I believe this would have been
done by pumping down through 1 inch pipe. Circulated cement
to surface but did not shut off surface water. 200 ft. of
cement was left inside of 8 5/8" casing.

Charles W. Harle

Ut F-35-10S-25E

5 1/2" casing at 1295'
Top perf at 1197'

Spot 25 Sx at 1197' and tag
RIH to 500' and fill to surface with cement.

Charles W. Harle
Zimmerman #3
Ut C-35-10S-25E

8 5/8 set at 320'
I find no record of cementing.

We may possibly can pull this 8 5/8" and ready mix, or we
may need to pack off on surface and circulate cement.
