

- 996' - 1010' Glassy anhydrite, with some finely sandy, hard, red shale
- 1020' Glassy to white anhydrite & some hard silty fine red sand
- 1025' Glassy to white anhydrite. Little light gray dolomitic limestone.
Note: The depth of 1020' may mark the top of the Capitan formation.
- 1035' Massive, white to glassy anhydrite & silty, fine red sand.
- 1080' White to glassy anhydrite
- 1095' White anhydrite & very light gray dolomitic limestone.
- 1110' Glassy anhydrite. Little gray to reddish shale.
- 1118' Glassy anhydrite. Little light gray dolomitic to anhydritic limestone
- 1135' White to glassy anhydrite & light gray dolomitic limestone mixture.
- 1156' White to glassy anhydrite. Little light gray dolomitic limestone.
- 1166' Glassy anhydrite & dense, gray, mottled (with anhydrite) dolomitic ls.
Note: Depth of 1156' may be the top of the Grayburg formation.
- 1177' Dense, light gray dolomitic limestone. Grayburg type. Little anhydrite
- 1184' Light gray dolomitic limestone. Mottled with included anhydrite.
- 1190' Light gray dolomitic limestone. Less anhydrite than above.
- 1243' White to gray to glassy anhydrite.
- 1255' White to glassy anhydrite & gray dolomitic limestone. Some medium sized individual sand grains.
- 1265' White to glassy anhydrite
- 1315' Gray to glassy anhydrite
- 1330' " " " " Little gray dolomitic limestone.
- 1336' Dense gray dolomitic limestone
- 1366' Light gray, dense, granular crystalline limestone. Slightly anhydritic.
- 1380' Gray to white to glassy anhydrite
- 1410' Dense, gray to tannish dolomitic limestone. Included anhydrite.
- 1420' Limestone as above, plus white to glassy anhydrite.
- 1433' Light gray to tannish dolomitic limestone & white to glassy anhydrite
- 1441' Light gray to tannish, dolomitic limestone
- 1447' Light gray dolomitic limestone mottled with included anhydrite
- 1454' Light gray, granular crystalline limestone & fine gray sand
Top of San Andres 1454'
- 1469' Dense gray-tannish granular crystalline dolomitic limestone. In part slightly anhydritic
- 1474' Dense gray-brown dolomitic limestone
- 1480' White to glassy anhydrite
- 1500' Gray-tan, dense dolomitic limestone. In part anhydritic
- 1506' Dense, gray to tan dolomitic limestone. Slight trace of oil stain & odor
- 1516' Dense, gray tan, dolomitic limestone
- 1521' Gray shale with dense gray dolomitic limestone & a little white anhydrite.
Shale in part finely sandy. Is also calcareous.
- 1536' Dense, gray-tan, finely crystalline dolomitic limestone
- 1543' Dense, gray-tan dolomitic limestone. Some anhydrite.
- 1551' Dense, gray-tan dolomitic limestone. Some anhydrite. Trace of live oil staining. Fair odor.
- 1566' Dense gray to tannish dolomitic limestone. Considerable included anhydrite.
- 1575' Light gray-tannish, dense, highly oolitic, dolomitic limestone.
- 1596' Gray- granular crystalline dolomitic limestone. Distinct live oil staining. Limited porosity. Free oil appears after acid treating.
- 1598' Gray-tan, granular crystalline limestone. Oil stained. Very limited porosity
- 1604' Gray-tan, granular crystalline limestone. Somewhat improved porosity. Decrease in oil staining. May carry some water.
- 1620' Tan to black, dense dolomitic limestone. Some of dark coloring is probably due to hydrocarbon residue.
- 1626' Gray-tan, dense limestone. Little white anhydrite
- 1639' Tan, granular crystalline dolomitic limestone. Fair porosity. Appears to carry water.
- 1655' Tan to nearly white intimate mixture of dolomitic limestone & anhydrite. Dense and probably does not carry any water.
