Re: State E-92 Wells No. 2 F, 7 G
and 8 F, 26-10-26, Brown Pool,
Eddy County, New Mexico

Gentlemen:

The subject dry holes were reinspected November 16, 1967. This inspection revealed that the well markers were not completely and correctly identified in accordance with our letter of July 28, 1967, copy enclosed.

This work must be done in the near future or this matter will be turned over to our attorney.

These wells will be reinspected after 30 days.

Very truly yours,

OIL CONSERVATION COMMISSION

R. L. Stamets
Geologist

RLS/bh
Enc.

1. Introduction

The purpose of this study is to investigate the effects of the proposed system on the performance of the system.

The results of the study are as follows:

2. Methodology

The study was conducted using a controlled experiment. The participants were divided into two groups: the control group and the experimental group. The control group used the standard system, while the experimental group used the proposed system.

The results of the experiment are as follows:

The experimental group showed a significant improvement in performance compared to the control group.

The results of the study are as follows:

The experimental group showed a significant improvement in performance compared to the control group.

The results of the study are as follows:
