The elevation of the derrick floor above sea level is **3573.00** ft. **grd.**

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This test was drilled to T. D. 812' sand & shale. The Queen and Yates sections were tested with undesirable results. As discussed with Mr. Traywick, by telephone this date, we propose to plug this test as follows.

1. It will be necessary to leave all casing in hole. Cement was circulated on both the 4 1/2" and 7" casing.
2. There is a cast iron bridge plug in hole at 873'.
3. Set plug 325-873' with 3 sacks.
4. Set 3 sack surface plug and cement anchor pipe.
5. Fill all void intervals with heavy mud.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
