| The well was tested until October 10, 1971. On this date the well was shut in and we attempted to sell the well. We could not, so we are plugging the well. It produced a total of 161 barrels of oil during the testing of the well for the months of August, September, and October, 1971. |             |                        |                         |                           |                  |            |                    |               |      |        |       |                    |                           |                         |       |             |              |                          |  |
