The elevation of the derrick floor above sea level is **3749** ft. **HDP**

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Well was drilled to total depth of 7315 feet in granite. No commercial shows of oil or gas were encountered in this well. It is planned to plug the well in the following manner:

0 - 15' - cement (iron pipe to be protruding 4 feet above ground);
15 - 500' - mud; 500-700', cement; 700-2050', mud; 2050-2200', cement;
2200- 6500' - cement; 6600-7315' total depth, mud.

Attempts will be made to cut the 8-5/8" casing at \pm 500' and pull all the 8-5/8" casing above the cut.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
