ARTESIA REPRESENTATIVE

1. Introduction

The purpose of this study is to investigate the effects of the new educational system on the students' learning outcomes. The study is based on a sample of 100 students from the first grade of the primary school. The data was collected through a series of tests and questionnaires. The results show that the new system has a positive impact on the students' learning outcomes, particularly in the areas of reading and writing. The study also found that the new system has a positive impact on the students' motivation and interest in learning. The results of the study are discussed in detail in the following sections.

2. Methodology

The study was conducted using a quasi-experimental design. The sample was divided into two groups: the experimental group and the control group. The experimental group was taught using the new educational system, while the control group was taught using the traditional system. The data was collected through a series of tests and questionnaires. The results were analyzed using statistical methods.

3. Results and Discussion

The results of the study show that the new educational system has a positive impact on the students' learning outcomes. The experimental group scored significantly higher than the control group in the tests. The results also show that the new system has a positive impact on the students' motivation and interest in learning. The discussion of the results is presented in detail in the following sections.

Fig.

The figure shows the results of the study. The experimental group scored significantly higher than the control group in the tests. The results also show that the new system has a positive impact on the students' motivation and interest in learning. The discussion of the results is presented in detail in the following sections.
