DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Plan to drill a well to an estimated total depth of 8,000' with Rotary Tools to test the Devonian formation. All potential zones, if warranted, will be drillstem tested. Approximately 2400' of 9 5/8" OD casing will be set and cemented with sufficient cement to circulate to the surface. If an oil string is warranted, 5 1/2" OD casing will be run and cemented with sufficient cement to protect all potential zones. Plans are to mud-up at 5800'.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
