The elevation of the derrick floor above sea level is _____ ft. To be reported.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a well with rotary tools to an approximate depth of 3200' to test the producing capabilities of the San Andres formation. 300 ft. of 2-5/8" OD 24# casing will be set and cemented to surface. Should the well prove productive, 4-1/2" OD casing will be set to T.D. and cemented sufficiently to seal off all oil or gas bearing strata.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
