DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

11" Hole was drilled to 70' at which depth a cavernous condition was encountered and it was necessary to use five stages of cement before circulation could be established and drilling resumed. 8-5/8" hole was drilled from 70' to 156' at which depth 7" 23# casing was cemented with 70 sacks of Neat Cement of which approximately 20 sacks were circulated back to the surface. The plug was pumped down at 4:00 a.m. March 10, 1963 and the cement was allowed to set until 8:00 a.m. March 11, 1963.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
