J.J. TRAVIS #1 Rober Pad. **Sept. 24**, 19**64**

Well No. **#1** is located **1651** ft. from **[N]** line and **350** ft. from **[E]** line of sec. **24**

33 NE Sec 24 **6-E** **25-E** **New Mexico**
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Wildcat **Chaves** **New Mexico**
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is **3649.7** ft. **Gr.**

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

9-18-64

Set 10 1/4" surface casing (22,000) at 303 feet. Cemented with 100 sacks of cement, finished cementing at approx 8:30 AM. Cement did not circulate. Ran temperature survey at 7:00 PM. Top of cement showed to be at about 145 feet. See enclosed temperature survey chart and statement concerning temperature survey made by W.G. Poplin, Region Engineer, BJ Cementing Co.

9-19-64

Ran 100 feet of 1/4" macromi string down out side of 10 1/4" surface pipe to use when 4 1/2" oil string is run in an endeavor to get cement circulated to surface from top of cement plug at about 145 feet back to surface and around outside of 10 1/4" pipe. Resumed drilling at 4:00 PM

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

September 22, 1964

To Whom It May Concern:-

The enclosed temperature survey shows the top of the cement at approximately 148 feet. Our experience with the survey proves the tool to be accurate within \pm 20 feet.
