ARTESIA, OFFICE

Report for period October 1, 1972 to November 1, 1972:

We moved Wayne Adkins' cable tool rig back on location. The rods, tubing, and 5 $\frac{1}{2}$ " casing were pulled from the hole. The hole was crooked from 1840 to 1855' and required plugging back several times with rock and drilling out in order to straighten it so bailer would follow the tools. A straight reamer was run, and the size of the bailer was reduced. After two weeks of attempting to straighten the hole, we finally started making new hole. On November 1, 1972, we were drilling at 2020 feet.
