

6. CIRCULATING MEDIUM: The following mud program will be used to control pressure and circulate cuttings from the indicated intervals:

 Surface to 1200': Drill with fresh water gel/lime slurry having a viscosity of 34-36 Sec.

 1200' to TD: Drill with fresh water mud conditioned for control of viscosity, weight and water loss.
7. AUXILIARY EQUIPMENT: Auxiliary control equipment will include a kelly cock on the kelly joint and full opening safety valve, available on the rig floor, to fit the drill pipe in use.
8. TESTING, LOGGING AND CORING PROGRAM:

 Samples: Samples will be caught at 10' intervals from 500'.

 DST: A DST will be run in the Montoya.

 Logging: CN-D, BHC-SONIC, DLL and other logs as determined by the well site geologist. Mud analysis unit will be utilized from 500' to TD.
9. ABNORMAL PRESSURES, TEMPERATURES OR HYDROGEN SULFIDE:
 None anticipated.
10. ANTICIPATED STARTING DATE: Drilling will be commenced as soon as approval is obtained. Drilling and completion operations will be conducted during February and March of 1989.
