MANNES STATE 1-35

The Mannes State 1-35 was tested by a third party, Keltic Services, Inc., from July 10 to July 16, 1990. The potential of this well is 240 MCF/D per day.

Due to the distance of a gas line from the well, it would not be feasible for us to tie into the line at this time. However, we plan to drill subsequent wells in the future linking this with said pipe line. Therefore, we request shut-in status on this well.

Thank you.
