13. Describe Proposed or Completed Operation (clearly state all pertinent details including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomplete horizontally, give subsurface locations and measured and true vertical depths or pertinent markers and sands. Attach the Bond under which the work will be performed or provide the Bond No. on file with the BLM/ BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notice shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

Yates Petroleum Corporation proposes to perform a workover in the Silurian and possibly a recompletion to the Abo. Yates plans to drill out the CIBP @ 5875'. Push the CIBP down to the cement retainer @ 5980'. Circulate the hole clean and perforate Silurian 5950'-5958' (32 holes) then acidize. Depending on the results of the swab test will either produce the Silurian zone by itself or move the packer up the hole to commingle the Strawn and Silurian or complete the Abo. If the Abo is going to be completed, bleed the pressure off of the tubing and load the tubing w/7% KCL then ND the well-head and NU the BOP and release the packer @ 5930' then POOH w/the tubing and the packer. Set CIBP @ 5200' and perforate Pecos Slope Abo 4350'-4362' (13 holes), 4382'-4394' (13 holes), 4485'-4488' (4 holes), 4506'-4514' (9 holes), 4600'-4606' (7 holes), 4617'-4620' (4 holes), 4710'-4715' (6 holes). Stimulate as needed.

If Strawn + Silurian parts are abandoned, need to squeeze perf or set CIBP 50' above each zone w/35' cement on top.
