

WICHITA INDUSTRIES, INC.

#1-13 Federal

C SE SE (660' FSL & 660' FEL)

Sec. 13, T.4N, R.21E.

De Baca County, New Mexico

NTL-6 MULTIPOINT REQUIREMENTS

SURFACE USE and OPERATIONS PLAN

1. Existing Roads:

- A. A portion of a U.S. Geological Survey topographic map is enclosed showing existing roads. The access route to the well is shown in red and the map is labeled Exhibit "A".
- B. The proposed well, #1-13 Federal, is located approximately 30 miles northwest of the town of Fort Sumner, New Mexico.
- C. The well is located about 400' north of an existing unimproved dirt road. The dirt road goes 1.3 miles to an improved country road. The country road goes south 6.9 miles to U.S. Highway 60, and then 28 miles east to Fort Sumner, New Mexico.
- D. One light duty road and several unimproved dirt roads are located within a three-mile radius of the proposed well. These roads and trails are shown on the U.S.G.S. topographic map labeled Exhibit "B".
- E. It is planned to use the existing roads within 400 feet of the proposed well. The trail will remain unimproved during the drilling operations and won't require any fills, cuts, or culverts. The surface is very flat in this area.

2. Planned Access Roads:

- A. The access road is shown in Exhibits "A" and "B". No road construction is necessary for drilling the well. If the well is completed as a producer, it may be necessary to improve the trail into the location as follows:

- (1) The road will be bladed up with a road grader about 12 inches high and a width at the crown of 20 feet.
