DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On April 23, 1962, 35 sack of cement were spotted with the bottom of the drill pipe positioned at 950' from the surface which places a 90' cement plug immediately below the Glorieta Sand, another 20 sack plug was spotted at 450' back up to the stub of the 9 5/8 casing which was shot off at 395'. A 5 sack cement plug was placed in the top of the 13 3/8 surface casing, along with the required marker.

The final surface clean up on this location will be delayed until the rig is moved from the location and at that time the U.S.G.S. will be advised so that the final inspection can be made.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
