Mr. Bryce Duggar
P. O. Box 156
Carrizozo, New Mexico

Re: Edna Gallagher No. 1
SW SW, Sec. 26-6S-10E
Lincoln County, N. M.

Dear Mr. Duggar:

Application for Permit to Drill (Form C-101) the subject well was approved on March 24, 1967. To date we have received no additional reports. However, according to the Scout Report the well was spudded on May 12, 1967, 7" casing set at 535' and it is now shut down at a total depth of 550'. Commission Rules require the filing of progress reports on all wells drilled on State and Fee lands. Please file Form C-103, reporting the spud date, any water encountered and all casing that has been set in this well as soon as possible. A supply of these forms are enclosed for your convience.

If you have any questions about this please do not hesitate to call us.

Very truly yours,

Oil Conservation Commission

W. A. Gressett

W. A. Gressett

Introduction

1. The purpose of this study is to

investigate the effects of

the proposed system on the

performance of the system.

The study is divided into two main parts. The first part is a literature review of the existing research on the topic. The second part is an experimental study designed to evaluate the proposed system. The experimental study is divided into two sub-studies. The first sub-study is a pilot study designed to determine the feasibility of the proposed system. The second sub-study is a main study designed to evaluate the effects of the proposed system on the performance of the system. The results of the pilot study are presented in Chapter 3. The results of the main study are presented in Chapter 4. The conclusions of the study are presented in Chapter 5.

The study is organized as follows. Chapter 1 is the introduction. Chapter 2 is the literature review. Chapter 3 is the pilot study. Chapter 4 is the main study. Chapter 5 is the conclusions.

Chapter 1

Chapter 2

Chapter 3

Chapter 4

Chapter 5
