

I talked to Bob Babcock w/ state engineers office in Deming. Xter will need to run the 1000' of casing we permitted at and below that they aren't sure if there's any more water. He said they have personnel going out to this well daily and if Xter hits ^{good} water, state engineers will make them run casing to seal it off. But before the fact, they just don't have any information in this area that deep.

Null
