(County or Subdivision)

New Mexico
(State or Territory)

The elevation of the derrick floor above sea level is 4410 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We expect to set and cement 250' of 10 3/8" 44 lb surface casing and 1500' of 5 1/2" 14 lb long string, using sufficient cement to adequately protect any oil or gas above cement off, being at least 500 yards. This well is being drilled to test Pennsylvanian and Pre-Pennsylvanian beds to basement. Because of lack of subsurface information in this area, it is not possible to give depths of objective horizons.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

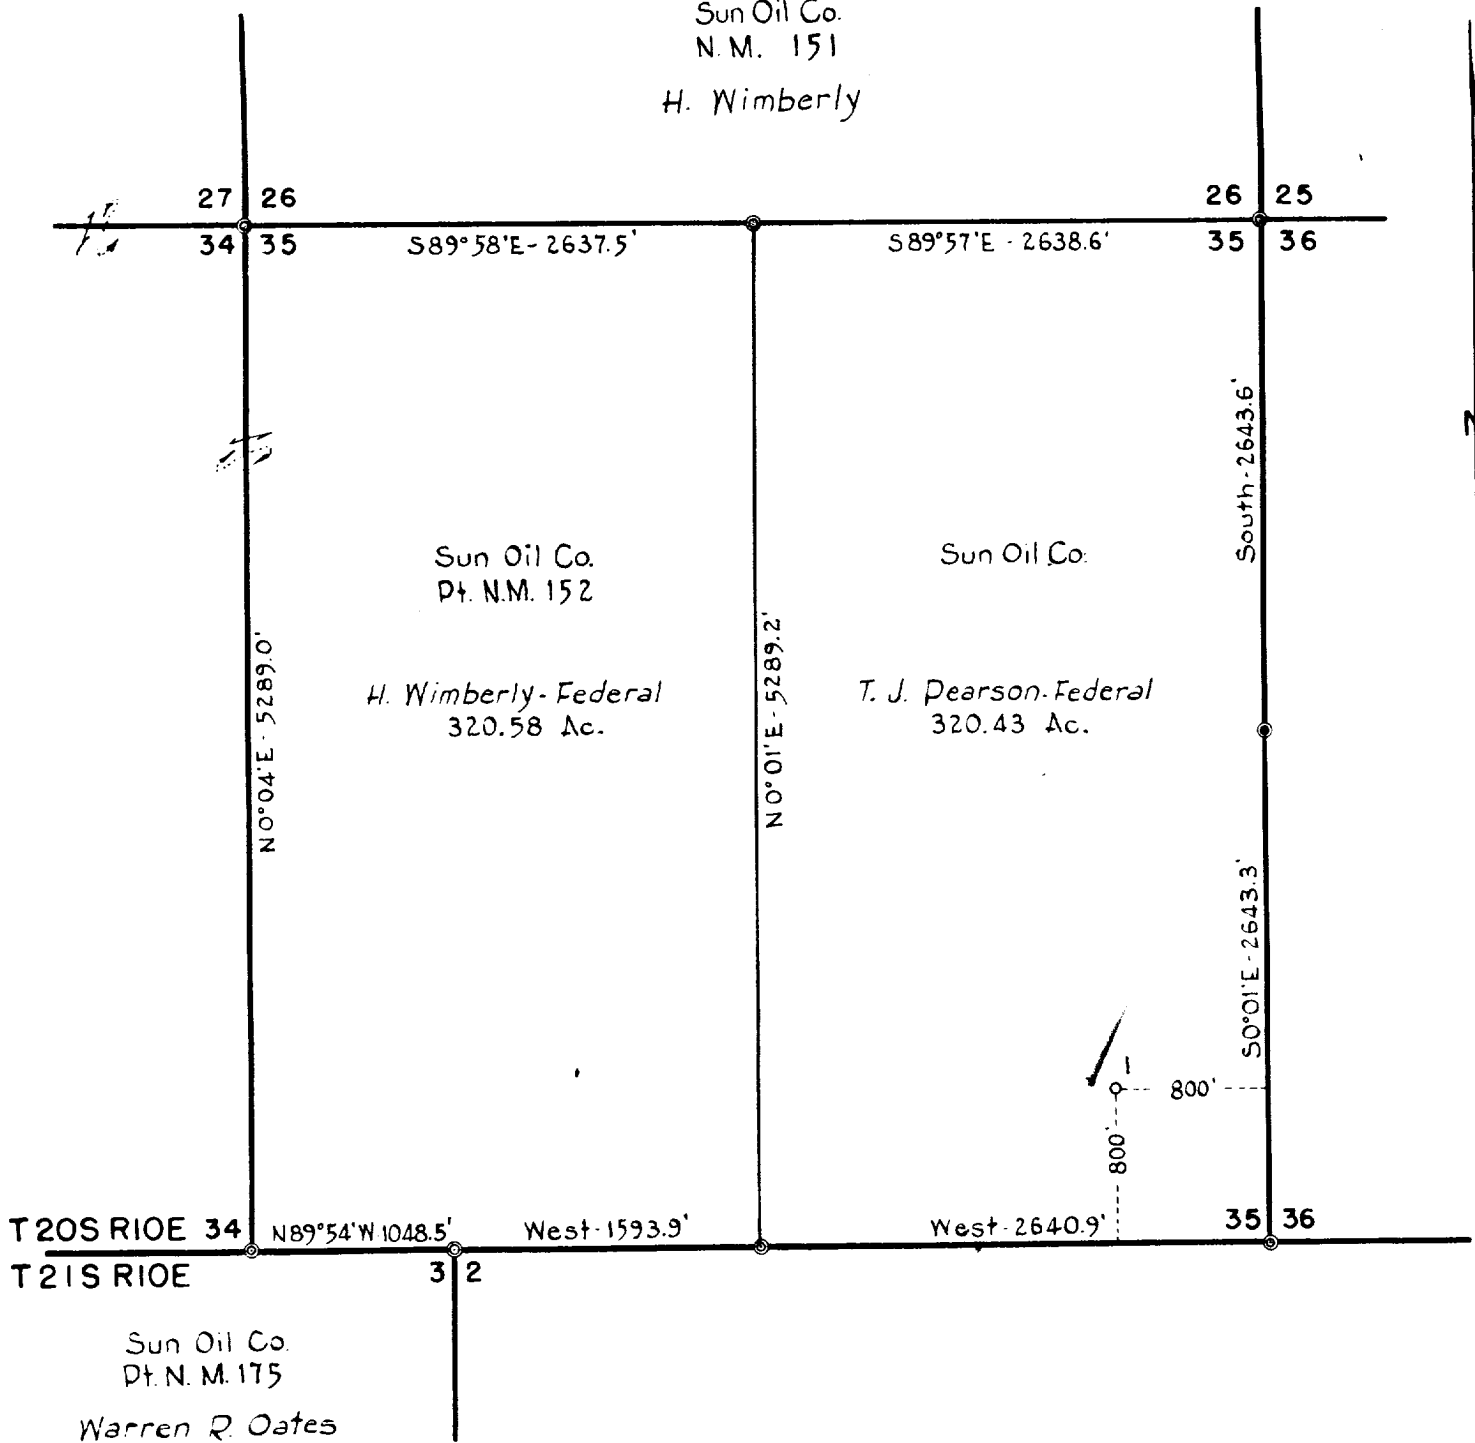

Company SUN OIL COMPANY

Address Box 2000

Del Rio, Texas
