## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

After running electrical logs the hole was circulated with a heavy mud. A 25 sack cement plug was set from 2000' to 2063'. An 8 sack cement plug was set in the top of the 9-5/8" OD casing and a steel plate was welded over the top. A 4-1/2" OD by 4' long steel marker and an identification sign was welded to the steel plate.

Notice: Our notice of intention to abandon specified that a part of the casing would be pulled. Verbal permission was obtained from Mr. Frost of the U.S.G.S. to eliminate the pulling of the casing.

MAY 18 1955

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
