Magruder

Well No. 13 is located 330 ft. from N line and 480 ft. from E line of sec. 35

SE/4 SE/4 35 17S 27E NMP

(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)

Undesignated Eddy New Mexico

(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3637 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this well with rotary tools to an approximate total depth of 3800' unless commercial production is obtained at a lesser depth.

We will run approximately 950' 8 5/8" O.D. casing to the Grayburg Dolomite and cement with 425 sacks of cement.

A 5 1/2" O.D. production string will be run if production is found.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
