The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Propose to drill to approximately 2,400 ft. to test the Lovington sand with cable tools. Will set surface pipe at top of salt and mud in, set intermediate string through red sand and mud in if water encountered. If production is obtained, will pull intermediate string and cement production string with sufficient cement to cover the red sand.

Production string will also be cemented by circulating 100 sacks cement around shoe of surface casing and then pull surface string.

R. D. Collier Drg. Company with cable tools

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
