The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

As per our conversations of 11/21 and 11/23 1956 we purpose to test to the San Andres or not to exceed 2600'. We will set and run 10" OD casing at approximately 625' to shut off any surface water. If production is encountered we purpose to bridge hole, pull 10" OD casing and run 8 5/8" OD or 7" OD casing and cement same to surface, drill bridge and run 5 1/2" OD casing and cement with 100 sacks or back to 1500'. If we get good show of oil we purpose to sand frac and test.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
