

SURFACE USE CHECK LIST  
GENERAL AMERICAN'S PROPOSED BREWER #28

Section 12, Township 16S, Range 29E  
Eddy County, New Mexico

1. Existing road are indicated in green and red on Exhibit "A".
2. Planned access roads will require only about 1320' of new construction as shown on Exhibit "A". Road and location will be surfaced with caliche.
3. Locations of wells are shown on Exhibit "B".
4. Lateral roads to well locations are shown on Exhibit "A".
5. There are no current tank batteries or flowlines within a half mile radius of the proposed well. If production is obtained the tank battery will be constructed on the drilling pad. Gas line route would depend on the purchaser.
6. Water supply for drilling this well will be furnished through the water line shown on Exhibit "C". The water line will be laid on top of the ground along side the road to the location.
7. Waste disposal will be handled by appropriate approved means at such times as it becomes necessary.
8. No camps are planned.
9. No airstrips will be constructed.
10. Locations and layout including position of the rig, mud tanks, reserve pits, pipe rack etc. are shown on Exhibit "D".
11. All pits used for drilling will be levelled after drying back to their natural contours.
12. The general topography of the drill site is flat sandy to rocky land. The vegetation is made up of mesquite, ragweed, sinnery and very small amount of grass.
