

11. OTHER INFORMATION

- A. Topography: The proposed wellsite is located in a relatively level area, with only minor surface undulations. The surface feature, Diamond Mound, is approximately 2-1/4 miles east of the proposed location.
- B. The topsoil at the wellsite is moderately soft sandy loam.
- C. Flora and fauna: The vegetation cover at the wellsite is moderately heavy for semi-arid desert land, and consists of mesquite, broomweed, and miscellaneous prairie flowers and weeds. No wildlife was observed but the area is inhabited by antelope, rabbits, lizards, and other wildlife typical of semi-arid desert areas. The area is used for cattle grazing.
- D. There are no ponds, lakes, or flowing streams or rivers in the immediate vicinity of the wellsite.
- E. The nearest dwelling and windmill are located approximately four miles northeast of the proposed wellsite.
- F. The wellsite is located on federally owned surface with federally owned minerals.
- G. An archaeological survey has been conducted by New Mexico Archaeological Services, Inc., P. O. Box 1341, Carlsbad, New Mexico, and their Archaeological Clearance Report will be submitted to all interested government agencies.

12. OPERATOR'S REPRESENTATIVES

- A. The Mesa Petroleum Co representatives responsible for assuring compliance with the approved surface use and operations plan are:
