SUNDRY NOTICES AND REPORTS ON WELLS

NOTICE OF INTENTION TO DRILL	☒	SUBSEQUENT REPORT OF WATER SHUT-OFF	
NOTICE OF INTENTION TO CHANGE PLANS		SUBSEQUENT REPORT OF SHOOTING OR ACIDIZING	
NOTICE OF INTENTION TO TEST WATER SHUT-OFF		SUBSEQUENT REPORT OF ALTERING CASING	
NOTICE OF INTENTION TO RE-DRILL OR REPAIR WELL		SUBSEQUENT REPORT OF REDRILLING OR REPAIR	
NOTICE OF INTENTION TO SHOOT OR ACIDIZE		SUBSEQUENT REPORT OF ABANDONMENT	
NOTICE OF INTENTION TO PULL OR ALTER CASING		SUPPLEMENTARY WELL HISTORY	
NOTICE OF INTENTION TO ABANDON WELL			

(INDICATE ABOVE BY CHECK MARK NATURE OF REPORT, NOTICE, OR OTHER DATA)

Tanner "A" February 9, 1953
Well No. 20 is located 330 ft. from N line and 2310 ft. from W line of sec. 18
23A 23A Sec. 18 17E 31E NORM
($\frac{1}{4}$ Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Perm Blky New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Plan to drill with cable tools to Seven Rivers pay at a depth of approximately 2200'. Will cement 8 3/8" OD casing in top of salt with 50 sacks of cement. Will cement 7" OD casing just above top of pay with 100 sacks of cement.

RECEIVED

Title Drilling Superintendent

THEORY OF THE EARTH

The theory of the earth is a branch of geology which deals with the origin and development of the earth and its various parts. It is a science which seeks to explain the processes which have shaped the earth and its features. The theory of the earth is based on the study of the earth's history and the changes which have taken place in its structure and composition.

THE ORIGIN OF THE EARTH

The origin of the earth is a subject which has been the subject of much speculation and debate. There are many theories as to how the earth came into being, but the most widely accepted theory is that the earth was formed from a cloud of gas and dust. This cloud, known as a nebula, collapsed under its own gravity, and the material in it began to clump together. As the clumps grew larger, they began to heat up, and eventually, the heat became so great that the material began to melt. This process continued until the earth had formed as a solid body.

THE DEVELOPMENT OF THE EARTH

The development of the earth is a process which has taken place over a long period of time. It is a process which has been shaped by a number of factors, including the earth's internal heat, the forces of gravity, and the effects of the sun and other celestial bodies. The development of the earth has resulted in the formation of the various features which we see on the earth's surface, including the continents, the oceans, and the mountains.

THE EARTH'S INTERIOR

The earth's interior is a subject which has been the subject of much research and speculation. There are many theories as to what the earth's interior is like, but the most widely accepted theory is that the earth is made up of several layers. The outermost layer is the crust, which is the thin layer of material which we see on the earth's surface. Below the crust is the mantle, which is a layer of material which is much hotter and more plastic than the crust. At the center of the earth is the core, which is a ball of molten metal.

THE EARTH'S SURFACE

The earth's surface is a subject which has been the subject of much research and speculation. There are many theories as to how the earth's surface has been shaped, but the most widely accepted theory is that the earth's surface has been shaped by a number of factors, including the forces of gravity, the effects of the sun and other celestial bodies, and the effects of the earth's internal heat. The earth's surface is a complex and ever-changing feature, and it is a subject which continues to fascinate and challenge scientists.

THE EARTH'S HISTORY

The earth's history is a subject which has been the subject of much research and speculation. There are many theories as to how the earth's history has been shaped, but the most widely accepted theory is that the earth's history has been shaped by a number of factors, including the forces of gravity, the effects of the sun and other celestial bodies, and the effects of the earth's internal heat. The earth's history is a complex and ever-changing feature, and it is a subject which continues to fascinate and challenge scientists.

Company Southern Production Company, Inc.
Lease Turner Well No. 28-A
Sec. 18 T. 17 S., R. 31 E., N.M.P.M.
Location 2310' from E. line & 330' from S. line
County Eddy New Mexico

This is to certify that the above plat was prepared from field notes of actual surveys made by me or under my supervision and that the same are true and correct to the best of my knowledge and belief.

Seal:
