NEW MEXICO OIL CONSERVATION COMMISSION

WELL LOCATION AND ACREAGE DEDICATION PLAT

Form C-102
Supersedes C-128
Effective 1-1-65

All distances must be from the outer boundaries of the Section.

Operator	Lease	Well No.
TENNECO OIL COMPANY	STATE "I"	26

Unit Letter	Section	Township	Range	County
C	21	17 SOUTH	29 EAST	EDDY

Actual Footage Location of Well:
660 feet from the NORTH line and 1980 feet from the WEST line

Ground Level Elev.	Producing Formation	Pool	Dedicated Acreage
	SA	Glor. Jackson	40 Acres

1. Outline the acreage dedicated to the subject well by colored pencil or hachure marks on the plat below.

2. If more than one lease is dedicated to the well, outline each and identify the ownership thereof (both as to working interest and royalty).

3. If more than one lease of different ownership is dedicated to the well, have the interests of all owners been consolidated by communitization, unitization, force-pooling. etc?

RECEIVED

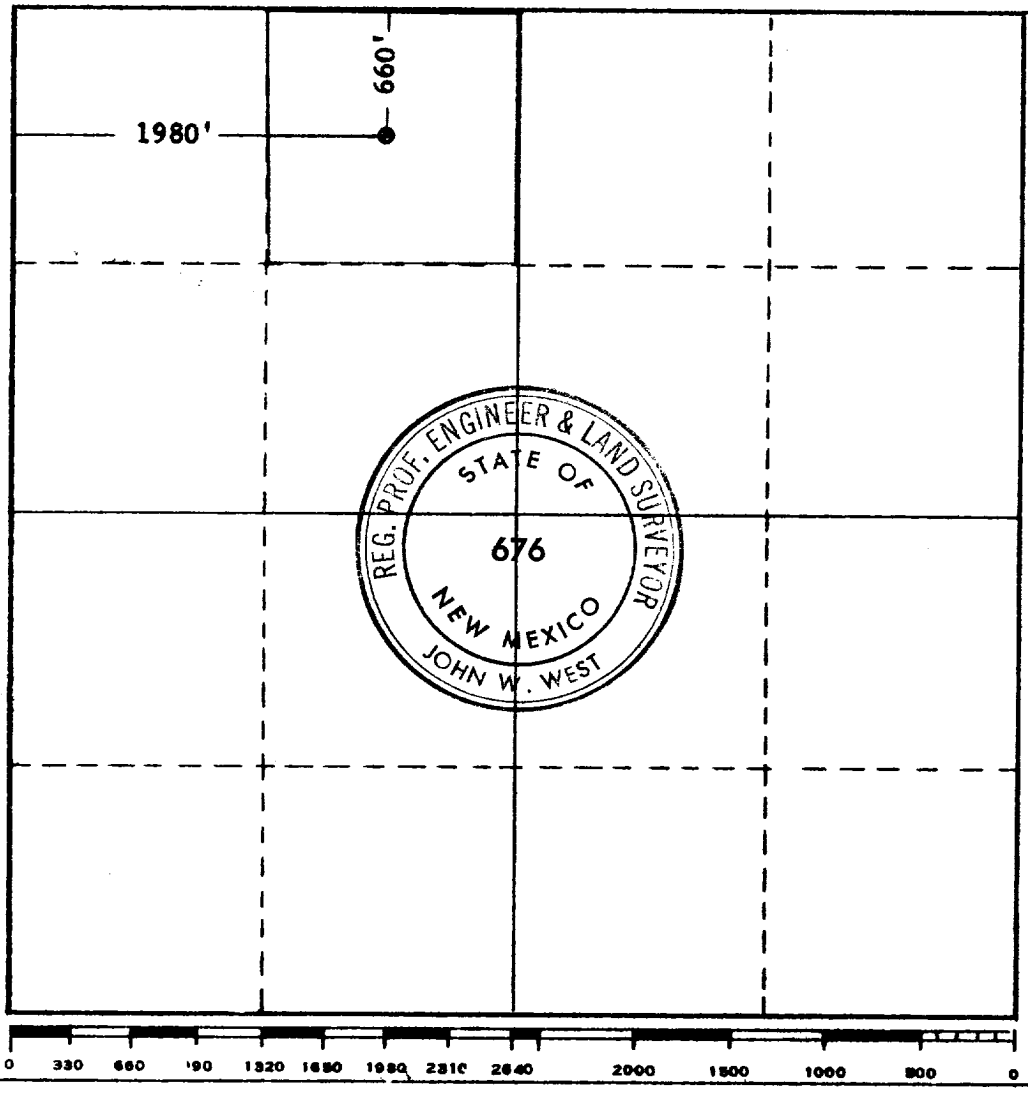
O. C. C.
ARTESIA

☐ Yes ☐ No If answer is "yes," type of consolidation _____

If answer is "no," list the owners and tract descriptions which have actually been consolidated. (Use reverse side of this form if necessary.) _____

No allowable will be assigned to the well until all interests have been consolidated (by communitization, unitization, forced-pooling, or otherwise) or until a non-standard unit, eliminating such interests, has been approved by the Commission.



CERTIFICATION

I hereby certify that the information contained herein is true and complete to the best of my knowledge and belief.

Name: A.W. LANG
Position: Dist Prod Supt
Company: Tenneco Oil Co
Date: May 18, 1966

I hereby certify that the well location shown on this plat was plotted from field notes of actual surveys made by me or under my supervision, and that the same is true and correct to the best of my knowledge and belief.

Date Surveyed: MAY 13, 1966

DRILLING, CASING AND CEMENTING PROGRAM

1. Drill 11" hole to 360' with OSC or equivalent.
2. Run and cement 8-5/8", 24#/ft., H-40, ST&C casing to T.D. Cement with class A saturated salt cement. If surface hole is dry drilled because of lost circulation, run a cement basket above the lost circulation zone and fill from the top. Run bar centralizers on guide shoe and bottom two joints. Use guide shoe and insert float.
3. If float holds, release pressure immediately. Center 8-5/8" casing, nipple up and install rotating head and BOP. After 12 hrs. from plug down, go in hole with drill pipe and bit, test casing to 800 psi for 30 min. Drill float collar and cement with water to guide shoe. Blow hole dry with air and drill with air and/or mist to T.D.
4. Drill 6-3/4" hole to T.D. Use W7R-2 or equivalent for first two bits, then run RG7AJ's or equivalents to T.D. Run insert-type reamer at 30' above bit to T.D. Complete drilling program to be furnished to rig.
5. Hole may become wet below 1700'±. Be prepared to mist at this depth.
6. Run 4-1/2", 10.5# casing to T.D. Use guide shoe and float collar. Use centralizers through productive zone.
7. Cement with sufficient class C with 16% gel and 3% salt to reach 2000' (no excess) and tail in with latex-class C to reach 100' above top productive zone (consult Geologist).
8. If float holds, release pressure, set slips & release rig. Run temperature survey after 8 hrs.

CASING DESIGN

a. CONDUCTOR _____ in. O.D.

Interval	Length	Weight	Grade	Thread	Casg. Cost/Ft.	Cum. Cost

b. SURFACE 8-5/8 in. O.D. Design Factor

Interval	Length of Int.	Wt. #/Ft.	Interval Weight	Cum. Weight	Grade	Joint	Col.	Ten.	Top Burst	Btm Burst	Casing Cost/Ft.	Cum. Cost
0-360	360	28			H-40	ST&C						

c. INTERMEDIATE 4-1/2 in. O.D. Max MW# Design Factor

Interval	Length of Int.	Wt. #/Ft.	Interval Weight	Cum. Weight	Grade	Joint	Col.	Ten.	Top Burst	Btm Burst	Casing Cost/Ft.	Cum. Cost
0-2900	2900	10.5			J-55	8rd.						

d. LINER _____ in. O.D. Design Factor

Interval	Length of Int.	Wt. #/Ft.	Interval Weight	Cum. Weight	Grade	Joint	Col.	Ten.	Top Burst	Btm Burst	Casing Cost/Ft.	Cum. Cost

0-360	Spud mud of bentonite, lime for viscosity as needed. If circulation is lost dry drill to casing point.
360-T.D.	Air and/or mist as needed.

Notes: 1) In the event that hole conditions necessitate going to fluid - brine will be used.
2) Several air or CO_2 blows may occur in the salt section and to a depth of 1400'.
3) Water may occur at 1700'± and misting may be necessary below this depth.
4) Gas may be encountered in Metex sand at 2280'±.

PRESSURE CONTROL

1. Use Series 900 blowout preventers as per Company specifications.
2. When nippling up, test blowout preventer and manifold to full working pressure with cold water, or as specified by Company representative.
3. Operate blowout preventers at least once each day, or as Company representative requires.
4. An extra set of drill pipe rams will be required on location at all times while drilling or completing.
5. All choke manifolds, lines and valves will be located at the side of and away from substructure.

MISCELLANEOUS REQUIREMENTS

1. Drill pipe will be tallied at all coring, testing, logging and casing points.

[illegible]

1. Deviation surveys shall be taken on every trip or every 500', whichever is first. All straight hole surveys will accompany AAODC tour sheet reports.

2. Deviation should not change more than $1\frac{1}{2}^{\circ}$ in any 100'. If deviation exceeds 2° per 100', hole shall be plugged back and straightened.

3. Maximum deviation shall be allowed as follows:

0 - 500	$\frac{1}{2}^{\circ}$	4000 - 6000	4°
500 -1000	1°	6000 - 8000	5°
1000 -2000	2°	8000 - 10000	6°
2000 -4000	3°	12000 - 14000	8°

[illegible]

1. A recorder with torque, hook load, and rate of penetration will be used.

2. Record 1' drilling time on recorder from 0 to T.D.

3. Record 10' drilling time from 1800 to T.D. on Company forms. Mail each sheet as soon as recorded with Daily Drilling Reports.

[illegible]

1. Sonic or density T.D. to surface.

[illegible]

As directed by geologist

[illegible]

None

Salt Top	288	Premier Sand	2420
Salt Base	638	San Andres	2443
Yates	688	Oolitic	2618
Queen	1758		
Metex	2280		

1. The API 10 Daily Drilling Report will be filled out completely and neatly each 8:00am tour. One clear and legible copy will be mailed daily to Tenneco Oil Company. Mail Company drilling sheets as soon as each sheet is finished with Daily Drilling Report.

2. A daily report sheet and a cost sheet will be furnished by the operator for the well. The contractor's tool pusher will keep these forms current and complete. The daily cost, total cumulative cost and cumulative mud cost will be given daily along with the Tenneco morning report. At the conclusion of the well, the cost forms will be mailed to Tenneco Oil Company, P. O. Box 1031, Midland, Texas.

3. The morning report shall be called to Tenneco's Midland office as soon after 8:00 C.S.T. each weekday morning as practical. Phone number is MU 3-4621, area code 915.

4. For notifications at other than office hours, call:
