DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

I plan to drill a 1900' San Andres rotary test.

I expect to use approximately 80' of 13 3/8" as conductor pipe.

8 5/8" will be cemented at approximately 910' with sufficient cement to circulate.

A 5 1/2" oil string will be cemented on bottom, using 150 sacks.

All casing will be run and cemented under methods approved by the U. S. Geological Survey.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
