Page Two

5. Location of tank battery and flow lines
If the well is productive, surface equipment will be set on the location site.
6. Location and type of water supply
Water will be purchased from commercial suppliers and trucked to well site.
7. Methods for handling waste disposal
Exhibit "C" attached is a layout of the well location.

Drilling wastes will be deposited in the reserve pit and be covered by fill in after drying out.

Other waste - garbage, trash, etc. - will be deposited in the trash pit and covered over on completion of drilling.

8. Location of camps
None
9. Location of airstrips
None
10. Location of Rig Layout
Exhibit "C" attached is a plat of the rig layout including reserve pit and trash pit. The location is an area of loose sand, and the drilling pad will be surfaced with six inches of caliche.
11. Plans for restoration of surface
All pits will be filled, the well location cleaned and levelled, and any other restoration work that may be required will be done.

This location is an arid region with very sparse vegetation. The surface is primarily loose or unconsolidated sand.

A schematic diagram of the blowout preventer installation to be utilized in the drilling of the well is attached as Exhibit "D".
