

- C. If the proposed well is non-productive, all rehabilitation and/or vegetation requirements of the Bureau of Reclamation and the United States Geological Survey will be complied with and will be accomplished as expeditiously as possible. All pits will be filled and leveled within 90 days after abandonment.

11. OTHER INFORMATION.

- A. Topography. The land surface in the area surrounding the wellsite is a relatively level, cobbled stream terrace.
- B. Topsoil is very patchy, the surface being primarily dolomite cobbles.
- C. Flora and fauna: The vegetation cover is very sparse due to the amount of cobbled surface, but some clumps of grass and scattered yucca and creosote bush are present. (More details in archaeologist's report). No wildlife was observed, but there were indications of rabbits. Cattle graze freely over the very sparsely grassed surface.
- D. There are no occupied dwellings in the area of the wellsite. A stock tank and corral is located about 1500 feet northeast of the proposed wellsite.
- E. There are no ponds, lakes, or flowing rivers or streams in the immediate vicinity of the wellsite. However, an east-west brush-choked dry stream bed, the south fork of Cawley Draw, lies 150 feet south of the wellsite.
- F. Surface ownership: Federal
- G. There is no evidence of any archaeological, historical, or cultural sites in the immediate area. An archaeological survey has been conducted by New Mexico Archaeological Services, Inc., P. O. Box 1341, Carlsbad, New Mexico, and their report has been submitted to the government agencies concerned.

12. OPERATOR'S REPRESENTATIVE

- A. The field representative responsible for assuring compliance with the approved surface use plan is:

Mark D. Wilson
1705 Briscoe Avenue
Artesia, New Mexico 88210
Telephone: 505-7466246

13. CERTIFICATION.

I hereby certify that I, or persons under my direct supervision, have inspected the proposed drillsite and access route; that I am familiar with
