On Friday February 26, 2016 at 0430 (MST), a release of produced water occurred after a failed fiberglass swage was discovered, resulting in the release of 141 bbls produced water with 95 bbls recovered. Immediate action was to isolate the header and make an emergency OneCall. Approximately 400 yards of wet soil was removed during remediation, with soil testing to follow. Location will be remediated in accordance with NMOCD and COPC policies.		
I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
