If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*

DCP Midstream's V-3-7-2 8-inch steel sweet gas pipeline was reported to have a blowing leak. DCP's construction crew was dispatched to depressurize and repair the line.

Describe Area Affected and Cleanup Action Taken.*

An estimated six bbls of condensate leaked from the line and impacted a 30' x 50' area on private land. DCP excavated impacted soils to a depth of three feet and stockpiled it on plastic sheeting. A composite sample was obtained from the excavated area and analyzed for BTEX and TPH. BTEX and TPH values must be below BTEX, TPH cleanup criteria prescribed in *Guidelines for Remediation of Leaks, Spills, and Releases (1993)* authored by the New Mexico Oil Conservation Division and is a function of groundwater depth and distance to water wells and surface water bodies. The depth to groundwater is understood to be >100 feet, there are no known domestic water wells within 200 feet, and no water bodies within 1000 feet. Results were within cleanup levels (Benzene <10 ppm, BTEX <50 ppm, TPH <5000 ppm) and the area backfilled with clean soil.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

RE: V-3-7-2

Enclosed are the results of analyses for samples received by the laboratory on 03/17/16 8:50.

Cardinal Laboratories is accredited through Texas NELAP under certificate number T104704398-15-7. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Celey D. Keene
