

1RP-4666

Investigation Report

Paladin Energy Corp., East Caprock SWD/Posey A5 Battery

Lea County, New Mexico

May 5, 2017

Introduction

Larson & Associates, Inc. (LAI) was requested by Paladin Energy Corp. (Paladin) to assess the extent of spills at the East Caprock salt water disposal (SWD) and Posey A5 battery (Site). A New Mexico Oil Conservation Division (OCD) field inspector discovered spills while conducting an inspection on February 23, 2017. Spills were observed around equipment and tanks at the East Caprock SWD and at the separator located near the southeast corner of the Posey A 5 battery. The spill at the East Caprock SWD was caused by a leak at the injection pump that flowed east and north around the tanks. The spill at the East Caprock SWD was mostly contained inside the earthen firewall. The spill at the Posey A 5 battery was caused by a hole in the separator and flowed south along the east side of the lease road for about 300 feet.

On April 4, 2017, Paladin submitted form C-141 (Release Notification and Corrective Action) to the OCD District 1 office in Hobbs, New Mexico. The C-141 noted a spill date of February 13, 2017. The OCD approved the initial C-141 on April 5, 2017, and requested a plan to delineate the vertical and horizontal limits for the spills. The delineation plan was submitted and approved by OCD on April 5, 2017. The Site is located west of Tatum, Lea County, New Mexico. The legal description is Unit O (SW/4, SE/4), Section 11, Township 12 South and Range 32 East. The geodetic position is 33° 17' 22.811" North and 103° 41' 03.547". Figure 1 presents a topographic map. Figure 2 presents an aerial map.

Physical Setting

The physical setting is as follows:

- Elevation is approximately 4,330 feet above mean sea level (MSL);
- Topography slopes toward the east;
- The nearest surface water feature is a depression (playa) located about 3,100 feet east of the Site;
- The soils are designated as "Kimbrough Gravelly Loam" and "Kimbrough-Lea complex", consisting of calcareous alluvium derived from reworking the Blackwater Draw (Pleistocene) and Ogallala (Pliocene) formations, in descending order;
- The soil developed over cemented material (caliche);
- The upper geological unit is the Tertiary-age Blackwater Draw and Ogallala formations, in descending order, comprised of very fine to medium-grained quartz sand and gravel, with minor amount of silt and clay with indistinct to massive crossbeds;
- The Ogallala formation is underlain by clay, silty clay, shale and sandstone of the Chile formation (Triassic) and is about 300 feet thick;
- The nearest fresh water well is located in Unit L (NW/4, SW/4), Section 1, Township 11 South, Range 32 East about 3,200 feet west - northwest (up gradient) of the Site;
- The well is used for livestock watering and has a reported depth to groundwater of approximately 30 feet below ground surface (bgs).

Recommended Remediation Action Levels

Recommended remediation action levels (RRALs) were calculated for benzene, total BTEX (benzene, ethylbenzene, toluene and xylenes) and total petroleum hydrocarbons (TPH) based on the following

criteria established by the New Mexico Oil Conservation Division (OCD) in "Guidelines for Remediation of Leaks, Spills and Releases, August 13, 1993":

| Criteria | Result | Score |
|--------------------------------|-----------------------|-------|
| Depth-to-Groundwater | <50 feet | 20 |
| Wellhead Protection Area | No | 0 |
| Distance to Surface Water Body | >1000 Horizontal Feet | 0 |

The following RRAL apply to the release for ranking score: 20

- Benzene 10 mg/Kg
- BTEX 50 mg/Kg
- TPH 100 mg/Kg

Soil Samples

On April 6 and 7, 2017, LAI personnel supervised drilling fourteen (14) air rotary drilled borings and four (4) hand auger borings for collecting soil samples. The air rotary borings were drilled by Scarborough Drilling, Inc., Lamesa, Texas, to depths of 15 feet below ground surface (bgs) at SB-12, 20 feet bgs (SB-10, SB-13 and SB-14), 25 feet bgs (SB-1 through SB-5, SB-7, SB-8, SB-9 and SB-11) and 30 feet bgs (SB-6). Soil samples were collected every 5 feet with a jam tube sampler. The hand auger borings were installed by LAI at four (4) locations (HA-1, HA-2, HA-3 and HA-4) where pooling of hydrocarbons was suspected. Auger refusal occurred at about 1 foot bgs (HA-2, HA-3, and HA-4) and 2 feet bgs (HA-1) due to caliche. The soil samples were analyzed by Permian Basin Environmental Laboratory, in Midland, Texas, for benzene, toluene, ethylbenzene, xylene (BTEX), total petroleum hydrocarbons (TPH) and chloride by EPA methods. Table 1 presents the laboratory analytical data summary. Figure 3 presents the soil boring locations. Attachment A presents the laboratory report. Attachment B presents photographs. Attachment C presents the initial C-141 and conditions.

Laboratory Results

Benzene and BTEX in soil samples were below the RRAL of 10 milligrams per kilogram (mg/Kg) and 50 mg/Kg, respectively. TPH was above the RRAL (100 mg/Kg) in the following soil samples:

| | |
|------------------------------|------------------------------|
| SB-5, 0 – 1' (34,400 mg/Kg) | SB-11, 0 – 1' (10,400 mg/Kg) |
| SB-6, 0 – 1' (33,800 mg/Kg) | SB-12, 0 – 1' (24,900 mg/Kg) |
| SB-6, 5' (6,460 mg/Kg) | SB-13, 0 – 1' (19,900 mg/Kg) |
| SB-7, 0 – 1' (54,900 mg/Kg) | HA-1, 0 – 1' (6,230 mg/Kg) |
| SB-7, 5' (1,290 mg/Kg) | HA-1, 1 – 2' (11,700 mg/Kg) |
| SB-8, 5' (965.8 mg/Kg) | HA-2, 0 – 1' (6,230 mg/kg) |
| SB-10, 0 – 1' (46,600 mg/Kg) | HA-3, 0 – 1' (11,700 mg/Kg) |
| SB-10, 5' (237.5 mg/Kg) | HA-4, 0 – 1' (731.4 mg/Kg) |

Chloride was above the required delineation limit of 250 milligrams per kilogram (mg/Kg) and the required ten (10) foot separation with groundwater in the deepest soil samples in the following borings:

| | |
|-------------------------|----------------------------|
| SB-1, 25' (442 mg/Kg) | SB-12, 15' (521 mg/Kg) |
| SB-6, 30' (1,320 mg/Kg) | SB-13, 20' (298 mg/Kg) |
| SB-7, 25' (605 mg/Kg) | SB-14, 20' (1,500 mg/Kg) |
| SB-8, 25' (1,990 mg/Kg) | HA-1, 1 – 2' (2,000 mg/Kg) |
| SB-9, 25' (293 mg/Kg) | HA-2, 0 – 1' (3,360 mg/Kg) |
| SB-10, 20' (408 mg/Kg) | HA-3, 0 – 1' (2,930 mg/kg) |
| SB-11, 20' (299 mg/Kg) | HA-4, 0 – 1' (1,990 mg/Kg) |

Conclusions

The following conclusions area based on the results of the spill investigation:

- Benzene in the soil samples was below the RRAL of 10 mg/Kg;
- BTEX in the soil samples was below the RRAL of 50 mg/Kg;
- The lateral extent of TPH in soil above the RRAL was delineated;
- The vertical extent of TPH in soil above the RRAL was delineated except in soil samples from the following locations: HA-1, 2' (691.4 mg/Kg), HA-2, 1' (6,230 mg/Kg), HA-3, 1' (11,700 mg/Kg) and HA-4 (731.4 mg/Kg) where additional sampling was not possible with hand auger methods due to caliche in the subsurface;
- TPH was above the RRAL at the following locations and depths:

| | |
|------------|------------|
| SB-5 (1') | SB-12 (1') |
| SB-6 (5') | SB-13 (1') |
| SB-7 (5') | HA-1 (>2') |
| SB-10 (5') | HA-2 (>1') |
| SB-11 (1') | HA-3 (>1') |
| | HA-4 (>1') |

- Chloride concentrations exceeding 250 mg/Kg in the deepest samples at the following locations without 10 feet of separation from groundwater:

| | |
|-------------------------|----------------------------|
| SB-1, 25' (442 mg/Kg) | SB-12, 15' (521 mg/Kg) |
| SB-6, 30' (1,320 mg/Kg) | SB-13, 20' (298 mg/Kg) |
| SB-7, 25' (605 mg/Kg) | SB-14, 20' (1,500 mg/Kg) |
| SB-8, 25' (1,990 mg/Kg) | HA-1, 1 – 2' (2,000 mg/Kg) |
| SB-9, 25' (293 mg/Kg) | HA-2, 0 – 1' (3,360 mg/Kg) |
| SB-10, 20' (408 mg/Kg) | HA-3, 0 – 1' (2,930 mg/kg) |
| SB-11, 20' (299 mg/Kg) | HA-4, 0 – 1' (1,990 mg/Kg) |

Notes and Definitions

| | |
|-------|--|
| S-GC | Surrogate recovery outside of control limits. The data was accepted based on valid recovery of the remaining surrogate. |
| QM-07 | The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery. |
| BULK | Samples received in Bulk soil containers |
| DET | Analyte DETECTED |
| ND | Analyte NOT DETECTED at or above the reporting limit |
| NR | Not Reported |
| dry | Sample results reported on a dry weight basis |
| RPD | Relative Percent Difference |
| LCS | Laboratory Control Spike |
| MS | Matrix Spike |
| Dup | Duplicate |

Report Approved By: _____ Date: 5/2/2017

Brent Barron, Laboratory Director/Technical Director

NATURE OF RELEASE

| | | |
|--|--|---|
| Type of Release: Produced Water/Oil | Volume of Release: Unknown | Volume Recovered: None |
| Source of Release: Injection Pump leak/hole in separator | Date and Hour of Occurrence: 02-13-2017 | Date and Hour of Discovery: 02-23-2017 |
| Was Immediate Notice Given? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Not Required | If YES, To Whom? | |
| By Whom? | Date and Hour | |
| Was a Watercourse Reached? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No | If YES, Volume Impacting the Watercourse. | |
| If a Watercourse was Impacted, Describe Fully.* | RECEIVED By Olivia Yu at 4:20 pm, Apr 05, 2017 | |

Describe Cause of Problem and Remedial Action Taken.* Leak at injection pump and hole in separator (repaired)

Describe Area Affected and Cleanup Action Taken.* Injection pump leak caused fluid (produced water and oil) to run east along south side of SWD to low area near east end of battery and west along north side of battery encroaching into pasture north of battery. Hole in separator caused oil to run south along east edge of lease road for about 250 feet. Will delineate and remediate to RRALs.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

pOY1709560088

Operator/Responsible Party,

The OCD has received the form C-141 you provided on 4/3/2017 regarding an unauthorized release. The information contained on that form has been entered into our incident database and remediation case number 1R-4666 has been assigned. Please refer to this case number in all future correspondence.

It is the Division's obligation under both the Oil & Gas Act and Water Quality Act to provide for the protection of public health and the environment. Our regulations (19.15.29.11 NMAC) state the following,

The responsible person shall complete division-approved corrective action for releases that endanger public health or the environment. The responsible person shall address releases in accordance with a remediation plan submitted to and approved by the division or with an abatement plan submitted in accordance with 19.15.30 NMAC. [emphasis added]

Release characterization is the first phase of corrective action unless the release is ongoing or is of limited volume and all impacts can be immediately addressed. Proper and cost-effective remediation typically cannot occur without adequate characterization of the impacts of any release. Furthermore, the Division has the ability to impose reasonable conditions upon the efforts it oversees. As such, the Division is requiring a workplan for the characterization of impacts associated with this release be submitted to the OCD District 1 office in Hobbs on or before 5/5/2017. If and when the release characterization workplan is approved, there will be an associated deadline for submittal of the resultant investigation report. Modest extensions of time to these deadlines may be granted, but only with acceptable justification.

The goals of a characterization effort are: 1) determination of the lateral and vertical extents along with the magnitude of soil contamination. 2) determine if groundwater or surface waters have been impacted. 3) If groundwater or surface waters have been impacted, what are the extents and magnitude of that impact. 4) The characterization of any other adverse impacts that may have occurred (examples: impacts on vegetation, impacts on wildlife, air quality, loss of use of property, etc.). To meet these goals as quickly as possible, the following items must, at a minimum, be addressed in the release characterization workplan and subsequent reporting:

- Horizontal delineation of soil impacts in each of the four cardinal compass directions. Adsorbed soil contamination must be characterized for the following constituents using the associated laboratory methods: benzene, toluene, ethylbenzene, and total xylenes by either Method 8260 or 8021, total petroleum hydrocarbons by Method 8015 extended range (GRO+DRO+MRO; C₆ thru C₃₆), and for chloride by Method 300. This is not an exclusive list of potential contaminants. Analyzed parameters should be modified based on the nature of the released substance(s). Soil sampling must be both within the impacted area and beyond.
- Vertical delineation of soil impacts. Adsorbed soil contamination must be characterized for the following constituents using the associated laboratory methods: benzene, toluene, ethylbenzene, and total xylenes by either Method 8260 or 8021, total petroleum hydrocarbons by Method 8015 extended range (GRO+DRO+MRO; C₆ thru C₃₆), and for chloride by Method 300. As above, this is not an exclusive list of potential contaminants and can be modified. Vertical characterization samples should be taken at depth intervals no greater than five feet apart. Lithologic description of encountered soils must also be provided. At least ten vertical feet of soils with contaminant concentrations at or below these values must be demonstrated as existing above the water table.
- Nominal detection limits for field and laboratory analyses must be provided.
- Composite sampling is not generally allowed.
- Field screening and assessment techniques are acceptable (headspace, titration, EC [include algorithm for validation purposes], EM, etc.), but the sampling and assay procedures must be clearly defined. Copies of field notes are highly desirable. A statistically significant set of split samples must be submitted for confirmatory laboratory analysis, including the laterally farthest and vertically deepest sets of soil samples. Make sure there are at least two soil samples submitted

for laboratory analysis from each borehole or test pit (highest observed contamination and deepest depth investigated). Copies of the actual laboratory results must be provided including chain of custody documentation.

- Probable depth to shallowest protectable groundwater and lateral distance to nearest surface water. If there is an estimate of groundwater depth, the information used to arrive at that estimate must be provided. If there is a reasonable assumption that the depth to protectable water is 50 feet or less, the responsible party should anticipate the need for at least one groundwater monitoring well to be installed in the area of likely maximum contamination.
- If groundwater contamination is encountered, an additional investigation workplan may be required to determine the extents of that contamination. Groundwater and/or surface water samples, if any, must be analyzed by a competent laboratory for volatile organic hydrocarbons (typically Method 8260 full list), total dissolved solids, pH, major anions and cations including chloride and sulfate, dissolved iron, and dissolved manganese. The investigation workplan must provide the groundwater sampling method(s) and sample handling protocols. To the fullest extent possible, aqueous analyses must be undertaken using nominal method detection limits. As with the soil analyses, copies of the actual laboratory results must be provided including chain of custody documentation.
- Accurately scaled and well-drafted site maps must be provided providing the location of borings, test pits, monitoring wells, potentially impacted areas, and significant surface features including roads and site infrastructure that might limit either the release characterization or remedial efforts. Field sketches may be included in subsequent reporting, but should not be considered stand-alone documentation of the site's layout. Digital photographic documentation of the location and fieldwork is recommended, especially if unusual circumstances are encountered.

Nothing herein should be interpreted to preclude emergency response actions or to imply immediate remediation by removal cannot proceed as warranted. Nonetheless, characterization of impacts and confirmation of the effectiveness of remedial efforts must still be provided to the OCD before any release incident will be closed.
