Good morning Mr. Pope:

Notes:

- NMOCD has groundwater data, approximately 1000 ft. SW of the release location, indicating depth to groundwater around 59 ft. bgs in 2017.
- Please remember to include the release point on figures and maps.

Please address these concerns with the delineation workplan for 1RP-3775:

- Based on aerial imagery, the impacted area within the facility appears not to have infrastructure preventing completion of release characterization. Please be advised that if the Responsible Operator does not address the release area within the fence line, 1RP-3775 will not receive closure.
- As the data for Vertical 2- about 15 ft. apart- does not correspond with the data presented by SB-1, the impacted soil in the vicinity of Vertical 2 will need to be addressed.
- Except for specific circumstances, confirmation bottom and sidewall samples will be required for verification of remedial activities.

NMSLO may have additional concerns.

Thanks, Olivia

Subject: 1RP-3775 - ConocoPhillips EVGSAU Satellite 5 Work Plan

Ms. Yu,

Please find the attached Work Plan for the ConocoPhillips 1RP 3775-EVGSAU Satellite 5 site. This document is being submitted for your review and approval, if in agreement, so Tetra Tech may proceed with the described remedial action. Please call me or reply to this email with any questions or comments. Thank you.
